Tips for Staying in Lodging Facilities During COVID-19

Updated November 3, 2020

The following Tip sheet was developed by the San Francisco Department of Public Health for use by Guests staying at Lodging Facilities and will be posted at https://www.sfcdcp.org/COVID-19. This Tip sheet may change as information is updated.

Please Note: Travel increases your chance of getting and spreading COVID-19. Staying home is the best way to protect yourself and others from COVID-19. You can get COVID-19 during your travels. You may feel well and not have any symptoms, but you can still spread COVID-19 to others. You and your travel companions (including children) may spread COVID-19 to other people including your family, friends, and community for 14 days after you were exposed to the virus.

Don’t travel if you are sick or if you have been around someone with COVID-19 in the past 14 days. Don’t travel with someone who is sick.

AUDIENCE: This guidance is for guests and personnel at Lodging Facilities in San Francisco.

Summary of Revisions since the 10/2/2020 Version

• Revised language, for consistency with other documents, on:
  o how COVID-19 is spread,
  o indoor risk, and
  o flu vaccination.

• Additional information on:
  o the role of ventilation, and
  o contact tracing.

COVID-19 Information

Our current understanding is that COVID-19 is mostly spread from person-to-person in the air through virus-containing droplets in the breath of someone with COVID-19. These droplets enter the air when a person breathes. Even more droplets can get in the air when infected people talk, sing, cough, or sneeze. People with COVID-19 may have no symptoms and can still be breathing out virus-containing droplets that can infect others. Transmission can occur through:

• Larger droplets. These larger droplets are sometimes called “ballistic droplets” because they travel in straight lines and are pulled down by gravity. People nearby, usually within 6 feet, are infected when they breathe in these droplets or if the droplets land in their eyes, nose, or mouth.

• Smaller droplets or infectious particles. These can float in the air for a period of time and/or travel beyond 6 feet on indoor air currents, especially in enclosed spaces with poor ventilation. People sharing the same space are infected when they breathe in these smaller droplets and particles or the droplets or particles land on their eyes, nose, or mouth – even if they are further than 6 feet away. These droplets are sometimes referred to as “aerosols” or “bioaerosols”.

COVID-19 can also spread if a person touches their eyes, nose or mouth after touching a contaminated surface (also known as a fomite), however this is less common.
COVID-19 Prevention

- **Wash your hands often with soap and water.** If soap and water are not available, use a hand sanitizer that contains at least 60% ethanol or 70 % isopropanol.
- **Avoid Close Contact.** To the greatest extent, maintain at least six feet of social distancing between yourself and the people who don’t live in your Household.
- **Wear a Face Covering.** Cover your mouth and nose with a Face Covering in public settings and when around people who don’t live in your Household.
- Routinely **clean and disinfect** frequently touched surfaces.
- **Monitor Your Health Daily.** Be alert of symptoms such as fever, cough, shortness of breath, or other symptoms. If you are experiencing any of these symptoms, stay home.

Indoor Risk

Scientists agree that the risk of transmitting COVID-19 is generally much greater indoors than outdoors. Consider the increased risk to yourself and your community while planning activities and dining. Any increase in the number of people indoors or the length of time spent indoors increases risk. Small rooms, narrow hallways, small elevators, and weak ventilation all increase indoor risk. Each activity that can be done outdoors, remotely, or by teleconference reduces risk. More detail can be found at sfcdc.org/indoorrisk

The Role Of Ventilation

Good ventilation controls droplets and infectious particles to prevent COVID-19 transmission by:

- removing air containing droplets and particles from the room,
- diluting the concentration of droplets and particles by adding fresh, uncontaminated air,
- filtering room air, removing droplets and particles from the air.

Whenever you are in a room or space that has been shared or is shared with people from outside your household assure yourself that there is good ventilation and that doors and windows are open, if possible.

### Guidance for All Guests at Lodging Facilities

**Before Your Stay**

- Review your Lodging Facility’s mechanisms for remote check-in, mobile room key, and contactless payment options that would minimize your contact with others.
- Make sure you packed all your essentials, including medicines, tissues, disinfectant wipes, etc.
- Consider bringing your own non-essentials including pens, papers, drinks, cups etc.
- Review any COVID-19 policies that the Lodging Facility may have. Your facility may have modified the availability of housekeeping services and may have removed frequently touched items such as TV remotes from your room. Some amenities such as indoor swimming or self-serve coffee may not be available.
- Flu vaccines are critical in the fight against COVID-19 by (1) keeping workers and communities healthy and (2) reducing strain on our healthcare and testing systems that are responding to COVID-19. Those over the age of 6 months are strongly encouraged to get a flu shot. Find out how to get one at www.sfcdc.org/flu
During Your Stay

- Follow all signage. The Lodging Facility may have markers on the floors to help you maintain social distancing, some hallways may be marked for one-way travel, and elevators will have rider limits.

- No visitors. Because the risk of infection rises when members of different households share space, you are strongly encouraged to stay in your room or accommodations with only members of your household. For the same reasons, you must not use your accommodations to entertain visitors who are not household members with your group.

- Consider taking the stairs. Otherwise wait to use the elevator until you can either ride alone or only with people from your household.

- Minimize use of areas that may lead to close contact with other people, for example outside patios, outdoor pools, outdoor hot tubs, and salons. Intense exercise that leads to heavy breathing is much safer outdoors. Any activity requiring mask removal increases risk and is best postponed until returning home.

- Request contactless delivery for any room service order. When requesting items to be brought to your room, ask that they be left at the door to avoid exposure to others outside your household.

- Minimize what you touch while staying in your room, especially areas that may be hard to clean such as inside the refrigerator, upholstered furniture, etc.

- If lodging with children, ensure that your children stay close to you and that they avoid touching any other person(s) or any item that does not belong to them. Children over the age of 5 are required to wear face coverings in San Francisco.

- Daily Housekeeping/Cleaning Service: All Guests should consider the increased risk of virus transmission when cleaning staff and Guests are breathing and touching surfaces in the same room—even when cleaning staff and Guests are not in the room at the same time.
  o Many to most COVID-19 positive individuals never show symptoms, so housekeeping staff must treat each room as if the Guest is COVID-19 positive. Asking for daily cleaning increases the risk of community transmission because housekeeping staff enter multiple environments inhabited by potentially COVID-19 positive individuals.
  o If you request Daily room cleaning, to minimize the risk of transmission for you and housekeeping staff, housekeeping staff will not begin cleaning until you have left the room, and you will not be able to return to your room until the housekeeping staff has completed your Daily room cleaning request. Cleaning service may take extra time because staff must take precautions against the spread of COVID-19 with enhanced safety and cleaning.

- The San Francisco Department of Public Health, in partnership with community, including hotels, restaurants and businesses, helps identify those who have had close contact with anyone who has COVID-19. People can transmit the virus 48 hours before they develop symptoms. Some people never develop symptoms and can still transmit the virus. We can help prevent COVID-19 transmission by contact tracing which helps identify people who may have been exposed and helping them quarantine, so they don’t inadvertently spread the disease. We do this whenever there is an outbreak of infectious diseases like measles, tuberculosis, and others to protect the community’s health.
Fitness Center and Gym

Fitness and exercise facilities and outdoor pools may be open. Guidance on staying safe in fitness facilities is available Fitness Centers and Gyms.

Dining Room and Coffee/Tea Shop

Dining rooms and coffee/tea shops may be open. Please review our guidance for safer dining.

At the End of Your Stay

- Place anything that you will be leaving behind in the garbage or trash bins. This includes removing and disposing of any food items that may have been left in the refrigerator, freezer, and pantry.
- Open windows for as long as you can to help ventilate the room before cleaning staff must enter, unless weather or safety does not permit. If available, make sure your AC/heating unit is on to exhaust air from the room and provide fresh outdoor air.
- Ask for remote check-out that does not require you to be around others.

Additional Considerations for Guests if you are Isolating or Quarantining in a Lodging Facility

In addition to the guidance for all guests above, anyone who is isolating or quarantining in a Lodging Facility because they have COVID-19 symptoms, tested positive, or have been in Close Contact with someone who is positive (that is, if you answered yes to one of the screening questions) should take additional measures to make their stay safer. Refer to the detailed information in Screening Handout for Guests at Lodging Facilities that was given to you by the lodging facility.

Before and During Your Stay

- Plan for how you will stay entertained and feel supported while you stay away from people until your isolation/quarantine period ends.
- Make sure you packed all your essentials, including medicines, tissues, disinfectant wipes, etc. so that you do not have to leave your room for the period of your isolation/quarantine.
- **No Daily Housekeeping Service.** You must not ask for room cleaning unless there is an emergency, to avoid exposing cleaning staff to possible infection.
- Additional information can be found on how to safely isolate and quarantine.
