

SF Harm Reduction Focus Group 2017

INTRODUCTION

1 / 9  11%

Thank you for participating in our brief survey about safe injection services. These are indoor spaces where people can inject previously-purchased drugs, without fear of arrest, under the supervision and with assistance from peers and health care professionals who help participants make their use safer.

Over 100 safe injection service sites exist around the world. They have been shown to reduce health and safety problems associated with drug use, including public drug use, discarded syringes, HIV and hepatitis infections, and overdose deaths. The City is exploring opening safe injection services, and we are interested in learning what residents and businesses think about them.
