On June 3, 2019, SFDPH activated the Incident Command System to align intra-departmental and inter-City agency work to increase syphilis screening and treatment, provide comprehensive services to pregnant women who need support, and to prevent congenital syphilis.

Syphilis Provider Detailing is available to any clinician/clinical group that provides or seeks to provide syphilis testing. A trained educator provides training and technical assistance, including clinical resources and patient materials, to support providers in syphilis screening, diagnosis, treatment, and patient education. Contact Alyson.Decker@sfdph.org for more information.

To access services for patients or partners or ask questions about syphilis, please call us at 415-487-5595. Please continue to report syphilis to us within 1 working day. We thank you for your critical partnership in syphilis prevention and treatment.

Provider STD Reporting: 415-487-5555, 415-431-4628 (fax)
