

# San Francisco Monthly STD Report

Data for June, 2013  
Report prepared July 25, 2013

Table 1. STDs among residents, June, 2013.

	2013		2012	
	month	YTD	month	YTD
Gonorrhea	207	1,113	215	1,274
Male rectal gonorrhea	72	344	75	398
Chlamydia	446	2,520	389	2,420
Male rectal chlamydia	104	578	93	554
Syphilis (adult total)	90	635	87	495
Primary & secondary	45	272	42	251
Early latent	35	273	33	172
Unknown latent	0	0	0	1
Late latent	10	90	12	71
Neurosyphilis	1	4	0	3
Congenital syphilis	0	0	0	0
PID	3	39	10	60

Figure 1. Monthly STD trends for San Francisco. Syphilis cases different scale.

Table 2. Selected STD cases and rates for San Francisco by age and race/ethnicity, 2013 through June only. Rates equal cases per 100,000 residents per year based on 2000 US Census data.

	(All races)		Asian/PI		African American		Hispanic		White	
	cases	rate	cases	rate	cases	rate	cases	rate	cases	rate
<i>All ages</i>										
Chlamydia	2,520	648.9	362	286.9	366	1,142.5	364	664.8	841	496.3
Gonorrhea	1,113	286.6	95	75.3	128	399.6	173	316.0	592	349.4
Early syphilis	545	140.3	37	29.3	53	165.4	111	202.7	315	185.9
<i>Under 20 yrs</i>										
Chlamydia	241	938.3	26	238.6	102	3,098.3	32	577.7	22	396.6
Gonorrhea	36	140.2	1	9.2	19	577.1	3	54.2	8	144.2
Early syphilis	0	0.0	0	0.0	0	0.0	0	0.0	0	0.0

Table 3. HIV testing among City Clinic patients, June, 2013.

	2013		2012	
	month	YTD	month	YTD
Tests	555	3,265	414	2,496
Antibody positive	7	35	7	42
Acute HIV infection	4	12	1	12

Note: All statistics are provisional until the annual report is released for the year. Morbidity is based on date of diagnosis. Totals for past months may change due to delays in reporting from labs and providers.

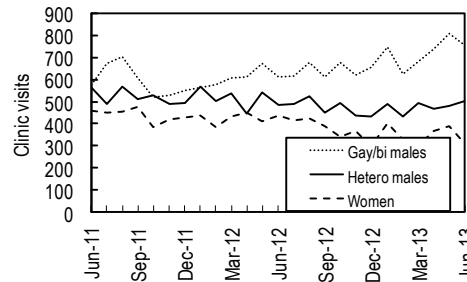

Figure 2. City Clinic visits by gender and orientation.

Figure 3. Average number of recent\* sex partners for City Clinic visits by gender and sexual orientation. \*Recall period is 3 months.

## HIV Partner Services: Another tool to improve care and prevention

HIV Partner Services (HIV-PS) refer to a broad range of services offered to people infected with HIV/AIDS including confirmation of HIV test results, referrals for medical care and other social services, and voluntary participation in 3rd party notification, where health department staff confidentially notify partners of HIV infected persons of potential exposure and offer these partners HIV testing. The goals of HIV-PS are to improve the individual health of HIV-infected persons and also to reduce the number of undiagnosed and untreated persons with HIV in San Francisco, improving the overall health of communities. The San Francisco Department of Public Health's Population Health Division has been offering HIV-PS for over a decade and over time has expanded the number of HIV infected persons who are offered this program. HIV-PS is offered to persons newly diagnosed with HIV at San Francisco City Clinic, San Francisco General Hospital and its affiliated community clinics and select private medical providers in San Francisco. In 2012, 257 persons newly infected with HIV were interviewed and named a total of 185 sexual or needle sharing partners. Of these 185 partners, 23% were known to be HIV infected. Of the remaining 142 partners with unknown HIV status, 67 (47%) were tested for HIV through the HIV-PS program; a high proportion (16%) of those tested were HIV infected. HIV-PS is highly successful in identifying HIV-infected individuals in order to link them to crucial care and prevention services and continues to be one component of a comprehensive approach to HIV prevention in San Francisco. More information about HIV-PS can be found in the San Francisco Department of Public Health HIV Partner Services Update found here <http://www.sfcityclinic.org/providers/#Surveillance> or by contacting Charles Fann at [Charles.Fann@sfdph.org](mailto:Charles.Fann@sfdph.org).
