2019 Community Health Assessment
Michelle Kirian, MPH – DPH Population Health Division. 05.21.2019

As a result of the discussion at the May 7, 2019 Health Commission meeting, the following edits were made to the 2019 Community Health Needs Assessment and to the resolution:

1. **Page 4.** A letter from Dr. Colfax’s office was added.

2. **On pages 7 (executive summary) and 20** the text was edited to clearly state the numbers of residents with health insurance and health care access.
   - **On page 7 (executive Summary) text was edited to,** “San Francisco continued to see gains in access to health care with 10,000 fewer residents uninsured in 2017 than in 2015. Of the estimated 31,500 uninsured residents, more than 15,300 have health care access through Healthy San Francisco or Healthy Kids. Approximately 2% of San Franciscans remain without access.”
   - **On page 20 the text was edited to,** “Over 10,000 fewer San Franciscans were uninsured in 2017 compared to 2015. However, 2% of San Franciscans, 16,000, still lack insurance or health care access via Healthy San Francisco or Healthy Kids.”

3. **To acknowledge the assessment’s inability to assess the health needs specific to transgender residents,** the following text was added to page 11, “To reveal health disparities, the Community Health Status Assessment analyzed data by age, race/ethnicity, poverty, place, and more. However, available data do not permit analyses for all groups which are known to experience health inequities including Native Americans, people who identify as LGBTQ, transgender persons and persons with disabilities.”

4. **To acknowledge Mayor Lee’s role in DPH’s Public Health Accreditation the resolution’s first whereas statement was edited to read,** “WHEREAS, in 2011, the San Francisco Health Commission and Mayor Edwin M. Lee made achieving and maintaining Public Health Accreditation a priority for the Department of Public Health”

5. **To recognize the need to address the social determinants of health,** the resolution’s 9th whereas statement was edited to, “WHEREAS, the 2019 Community Health Needs Assessment identified two foundational issues—Economic Barriers to Health, and Racial Health Inequities—which affect health at every level and must be addressed to improve the social determinants of health in San Francisco”

6. **To acknowledge the inability of this assessment to identify needs specific to all subpopulation/communities in San Francisco** the following whereas statement was added to the resolution, “WHEREAS, the 2019 Community Health Improvement Plan identified gaps in population-based data, such as transgender persons with a known higher burden of illness, and the need to close this data gap in order to protect and improve the health of transgender communities”

7. **Finally, minor changes were made to the report to correct for spelling and grammatical errors.**
