Notes on race and ethnicity

Collecting and using data by race and ethnicity is important for monitoring and addressing health inequities and differences.¹ Racial and ethnic data categories are social-political constructs that should not be interpreted as being genetic, biological, or anthropological in nature but which instead serve to identify underlying conditions which produce disparities.²

The races/ethnicities represented in this report include those listed in Table 1. Estimates are shown for all race and ethnic groups where data collection methods provide sufficient data.

Notes on sex and gender

According to the World Health Organization, "sex" refers to the biological and physiological characteristics that define men and women. "Gender" refers to the socially constructed roles, behaviors, activities, and attributes that a given society considers appropriate for men and women.³ Gender identities include male, female, trans-male, and trans-female.⁴

While biological, social, and personal history aspects of sex and gender identity may matter for understanding health differences, the data sources used in this report typically do not capture gender accurately or do not have sufficient data to produce stable estimates for each of the possible gender

Table 1: Definitions for racial and ethnic categories¹

	Description of race/ethnicity
Asian	A person having origins in any of the original peoples of the Far East, Southeast Asia (including Philippines), or the Indian subcontinent. Where data are available for Asian subpopulations, such as Chinese or Filipino, estimates for the subpopulations are presented.
Asian and Pacific Islander (API)	Includes persons identifying as Asian and or Pacific Islander. Where possible, data for Asians are shown separately from those for Pacific Islanders.
Black/African American (B/AA)	A person having origins of any of the black ethnic groups of Africa.
Latino(a)	A person having origins in Mexico, Central America, South America, Puerto Rico, or Cuba. Latino includes persons self-identifying as Latino, Hispanic, or Chicano, regard-less of race.
Multi-Ethnic	A person having origins in more than one of the races listed. Excludes persons with a Latino ethnicity.
Native American	A person having origins in any of the original peoples of North American, Central America, or South America.
Other	Tables and figures may use "other" where data from multiple race/ethnicities are grouped together due to low numbers of responses.
Pacific Islander	A person having origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific Island.
Unknown	Tables and Figures may include statistics for persons who decline to respond or enter an invalid race/ethnicity responds.
White	A person having origins in any of the original peoples of Europe, the Middle East, or North Africa.
