

**HEALTH COMMISSION
CITY AND COUNTY OF SAN FRANCISCO
Resolution No. 15-4**

**.In Support of Improving the Oral Health of All Children
in the City and County of San Francisco County**

WHEREAS, Tooth decay is the most common chronic disease of childhood, yet is a largely unrecognized public health crisis; and

WHEREAS, If left untreated, tooth decay (or caries) leads to pain and infection resulting in difficulty sleeping, eating, attending school, and future dental problems as an adult, and can be costly to the individual, family, healthcare system, and government; and

WHEREAS, Without healthy teeth, a child cannot achieve overall health, as caries negatively affects nutrition, growth and weight gain;ⁱ and

WHEREAS, Poor oral health also affects learning; toothaches lead to school absences, which is a ready indicator of children's health. In California, children miss an estimated 874,000 school days due to dental problems;^{ii, iii} and

WHEREAS, The cost of emergency dental care is approximately ten times more than the cost of Early Childhood Caries preventive dental care (\$6,498 vs. \$660);^{iv} and

WHEREAS, Medicaid-enrolled preschool children who have an early preventive dental visit are more likely to have additional preventive services and have lower overall dental costs; and^v

WHEREAS, Despite being virtually 100% preventable, almost 40% of San Francisco children have experienced tooth decay by the time they reach kindergarten; and.

WHEREAS, There are profound disparities in children's oral health that have persisted over time. In San Francisco, untreated tooth decay is more than two times more common for children of color and low-income children, than for Caucasian and higher income children; and

WHEREAS, Oral health is an integral part of overall health and, therefore, oral health care is an essential component of comprehensive health care; and

WHEREAS, Access to oral health care is essential to promoting and maintaining overall health and well-being, and utilization of dental services result in improved oral health;^{vi} and

WHEREAS, The mission of the San Francisco Department of Public Health (SFPDH) is to protect and promote the health of all San Franciscans; and

WHEREAS, SFPDH provides community based dental services and an annual citywide kindergarten dental assessment; and SFPDH Maternal Child and Adolescent Health Section provides education, case management, community coordination and advocacy for the most underserved and vulnerable residents in San Francisco; and

WHEREAS, SFPDH Primary Care Section provides full scope dental care to children and adults in our Primary Care dental clinics, with 8,847 patient visits in FY13/14; and

WHEREAS, Oral health improvements are most successful when oral health providers, medical providers, policy makers, and other stakeholders coalesce around a common ground of basic preventive strategies, health literacy, and quality of care principles in order to improve the oral health of our community;^{vii} and

WHEREAS, The San Francisco Health Improvement Partnership (SF HIP) brought together over 50 health experts and community stakeholders who spent 18 months in a systematic process, assessing need, evaluating solutions, and prioritizing strategies and steps to improve the current status of children's oral health in San Francisco; and

WHEREAS, The process resulted in the SF HIP Children's Oral Health Strategic Plan, which includes strategies, indicators, tactics and performance measures for improving the oral health of San Francisco children; and

WHEREAS, The SF HIP Children's Oral Health Strategic Plan is consistent with the goals and objectives of the Population Health Division of the San Francisco Department of Public Health Strategic Plan (June 2014);^{viii} and

WHEREAS, SFPDH supports the goals of the SF HIP Children's Oral Health Strategic Plan, and is committed to planning for:

- Increasing the institution of fluoride varnish application in DPH Primary Care clinics;
- Integrating oral health messaging into existing DPH health promotion efforts; and
- Assessing the ability to increase access to dental care in non-traditional settings with sustainable funding.

NOW THEREFORE BE IT RESOLVED, that the San Francisco Health Commission is concerned about the chronic epidemic of childhood caries and resultant health disparities in San Francisco and is committed to improving the oral health of San Francisco children; and

BE IT FURTHER RESOLVED, that the San Francisco Health Commission recognizes as a priority the work of the SF HIP Children's Oral Health workgroup and endorses the recently developed SF HIP Children's Oral Health Strategic Plan; and

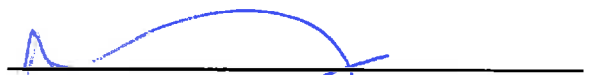

BE IT FURTHER RESOLVED, that the San Francisco Health Commission supports the collaborative work necessary for successful implementation of this Strategic Plan by all stakeholders, including but not limited to: SFDPH, community health centers, private medical and dental clinics, university medical and dental schools, Medi-Cal Managed Care Health Plans, community-based organizations, schools, policymakers; city and community leaders, and advocates; and

BE IT FURTHER RESOLVED, that the San Francisco Health Commission requests that SFDPH support the SF HIP Children's Oral Health Strategic Plan goal of reducing caries experience in San Francisco's Kindergarteners from 37% in 2012 to 27% in 2017, including SFDPH's efforts to:

- Increase the institution of fluoride varnish application in DPH Primary Care clinics
- Integrate oral health messaging into existing DPH health promotion efforts; and
- Assess the ability to increase access to dental care, especially sealants, in non-traditional settings with sustainable funding; and

BE IT FURTHER RESOLVED, that the San Francisco Health Commission requests that SF HIP provide periodic updates to the Health Commission.

I hereby certify that the San Francisco Health Commission at its meeting of February 17, 2015 adopted the foregoing resolution.

Mark Morewitz
Executive Secretary to the Health Commission
