Executive Summary

Introduction

Laguna Honda Hospital and Rehabilitation Center (Laguna Honda), a general acute care hospital located in San Francisco, has one of the largest number of skilled nursing facility beds in the United States. As part of its mission to provide high quality, culturally competent long-term care and rehabilitation services to the diverse communities of San Francisco, it was important for the organization to provide a work environment where employees are engaged, supported and empowered.

To evaluate its work environment, Laguna Honda distributed a survey designed to provide the organization with valuable information and constructive feedback concerning its work environment and work place practices. Corey, Canapary & Galanis (CC&G) was contracted to compile and evaluate the information for this assessment.

Questionnaires were distributed to Laguna Honda employees by their department. Employees were given the option to complete the survey either online or by using a paper survey. Paper surveys were collected in boxes at locations throughout Laguna Honda, which were emptied periodically by Laguna Honda staff, and collected by a member of CC&G.

Response Rate

In total, 1,655 employees were contacted and 1,078 surveys were completed. This equals a response rate of **65%** (1,078 divided by 1,655), which is high for a survey of this type. Of the completed surveys, 788 were dropped into collection boxes at Laguna Honda or mailed directly to CC&G and 290 were completed online. To ensure proportional representation, results were weighted by department. In past years, results were not weighted. In addition, duplicate survey responses were identified and removed from data file. For more information about weighting and purging of duplicate survey responses, see “Methodology” in the Appendix.

Job Satisfaction Rating Changes Since 2016

- To provide an accurate comparison with the weighted 2017 data, 2016 data was weighted.
- Overall job satisfaction decreased, with 66% rating it excellent or good, compared to 70% in 2016.
- All rating attributes decreased since 2016, generally decreasing the excellent/good rating up to 11%
 - The largest decrease was *Cooperation among all Laguna Honda departments/units* with a 11% decrease in those rating it excellent or good (53% in 2017 vs. 64% in 2016)
 - The smallest decline was *Adequacy of equipment/supplies* with a 0.5% decrease in those rating it excellent or good (76.5% in 2017 vs 77% in 2016)

Job Satisfaction Attributes

- While there was a definite decrease in job satisfaction attribute ratings, most attributes still rated 60% or higher (excellent/good rating)
- The three highest rated attributes were:
 - *Adequacy of equipment/supplies* (77% excellent/good rating),
 - *Quality of training* (70% excellent/good rating), and
 - *Safety of workplace* (69% excellent/good rating)
- The three lowest rated attributes were:
 - *Opportunity for growth/training* (59% excellent/good rating),

- *Attentiveness of management to employee well-being* (59% excellent/good rating), and
- *Cooperation among all Laguna Honda departments/units* (53% excellent/good rating).

Overall Job Satisfaction Rating

- Two-thirds (66%) of employees rating their job satisfaction as Excellent or Good
 - Respondents from Clinical Support, H.R./Payroll, and the Pharmacy rated their job satisfaction the highest with 100% rating it excellent or good.
 - Respondents from Activity Therapy and EVS rated their job satisfaction the lowest with 21% and 38% (respectively) rating it excellent or good.
- Reasons for Excellent or Good Job Satisfaction Rating were:
 - Great teamwork/Cooperation/Good Co-workers,
 - Supervisors are supportive/professional/seek input, and
 - Enjoy working here/Good place to work.
- Reasons for Fair or Poor Job Satisfaction Rating were:
 - Favoritism/Nepotism/Racism/Inconsistent standards in assignment/discipline/promotion/hiring,
 - Lack of communication/Clear expectations from supervisors/management, and
 - Management/Supervisors are unprofessional/do not show leadership/do not plan/are ineffective/are not accountable.

Attributes Most Affecting Satisfaction

Attribute ratings were analyzed to determine which attributes have the most impact on overall employee satisfaction.

- Attributes impacting overall employee satisfaction...where Laguna Honda is doing relatively well were:
 - Communication among co-workers/staff,
 - Access to management for employees, and
 - Communication by direct supervisor/manager,
- Attributes impacting overall employee satisfaction...where Laguna Honda can improve were:
 - Clear expectations from direct supervisor/manager,
 - Appreciation of my work from my supervisor/manager,
 - Opportunity to give input,
 - Attentiveness of management to employee well-being, and
 - Regular communication about my progress

Laguna Honda as a Place to Work

- When asked to rate their organization between 1 and 10 (with ten being the best), half of employees (47%) rated their organization between 8 and 10. Only 12% rated their organization between 1 and 3.
- Most employees (82%) would recommend their organization as a place to work.

Key Improvements

When asked for specific suggestions for improvement, the top suggestions by employees were:

- Adequate/More staff /Revised staffing procedures,
- Staff Appreciation/Less Micromanagement/Antagonistic Management Style/Reduce The “Us Vs. Them”/Finger Pointing Relationships Between Management and Workers, and
- Better communication up and down the hierarchy/between departments

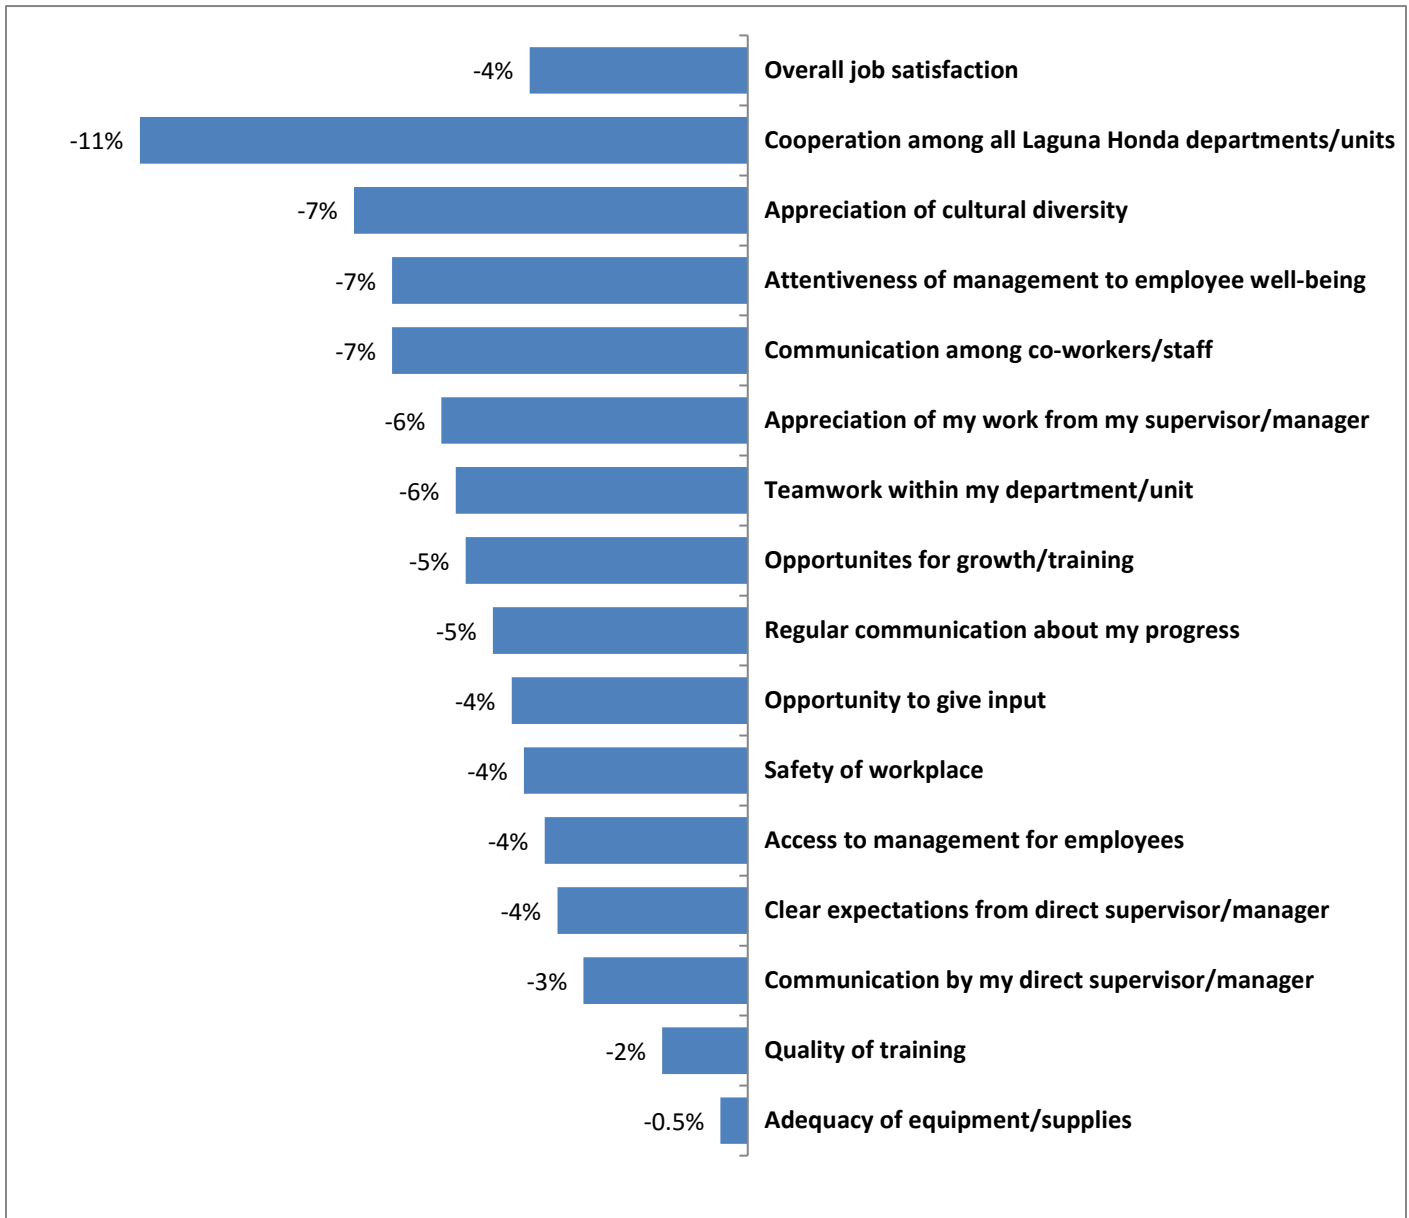

Rating Attributes (Overall)*

*Mean Score in parenthesis after attribute. Mean scores are based on a 4 point scale

Rating Attributes (Change-Excellent or Good)*

Difference between “Excellent or Good” ratings in 2017 vs 2016.

*2016 data was originally unweighted. To provide an accurate comparison with the weighted 2017 data, 2016 data was weighted for this report.

Rating Attributes (Change-Detail)*

	2017			2016			Difference

Job Satisfaction Quadrant Analysis

This chart is designed to help set priorities for future initiatives to improve employee satisfaction. The chart quantifies how much impact each service characteristic has on overall satisfaction from an employee perspective (using the vertical axis) and shows the average employee rating for each characteristic (using the horizontal axis).

Job Satisfaction Quadrant Analysis

The chart is designed to help set priorities for future initiatives to improve employee satisfaction. The chart quantifies how much impact each service characteristic has on overall satisfaction from an employee perspective (using the vertical axis) and shows the average employee rating for each characteristic (using the horizontal axis).

Values along the horizontal axis are average ratings. Employees marked their ratings on a scale of 1 = poor and 4 = excellent, so higher ratings on the right side of the Quadrant Chart are better scores and those on the left side are worse. The vertical axis ("Derived Impact") scale was derived by correlating each of the attributes with employees' overall satisfaction rating. Those attributes having strong correlations with overall satisfaction are seen as "More Impact," while those with weaker correlations are seen as "Less Impact."

For example, ratings of "Opportunity to give input" are very strongly correlated with overall satisfaction (i.e., employees are happy with their opportunity to give input tend to be more satisfied overall, and, conversely, employees that are disappointed with their supervisor/manager's appreciation of their work tend to be less satisfied overall). On the other hand, employee ratings of "Equipment/supply availability" have only a weak correlation with overall satisfaction (i.e., it is not uncommon for employees to rate adequacy of equipment/supplies highly, even though they are dissatisfied overall). Therefore, "Appreciation of my work..." is located in the upper part of the chart, while: "Adequacy of equipment/supplies" is located in the lower part.

The Issues most affecting employee satisfaction are:

- Regular communication about my progress
- Attentiveness to employee well being
- Opportunity to give input
- Appreciation of my work from my supervisor/manager
- Appreciation for cultural diversity
- Teamwork within my department/unit

Note that the attributes are ranked left to right based on their rating, so while "Cooperation among all Laguna Honda department/units" has a low rating compared to the other attributes, it has the lower impact on satisfaction compared to the other attributes.

For comparison, the Quadrant Analysis chart from the 2016 survey is included after the 2017 chart.

Methodology

Methodology

Laguna Honda Hospital and Rehabilitation Center (Laguna Honda), a general acute care hospital located in San Francisco, has one of the largest number of skilled nursing facility beds in the United States. As part of its mission to provide high quality, culturally competent long-term care and rehabilitation services to the diverse communities of San Francisco, it was important for the organization to provide a work environment where employees are engaged, supported and empowered.

To evaluate its work environment, Laguna Honda distributed a survey designed to provide the organization with valuable information and constructive feedback concerning its work environment and work place practices. Corey, Canapary & Galanis (CC&G) was contracted to compile and evaluate the information for this assessment.

Questionnaires were distributed to Laguna Honda employees by their department. Employees were given the option to complete the survey either online or by using a paper survey. Paper surveys were collected in boxes at locations throughout Laguna Honda, which were emptied periodically by Laguna Honda staff, and collected by a member of CC&G.

Once paper surveys were delivered to CC&G, surveys were individually examined to verify completeness and check for duplication (as only one response per participant was permitted). Incomplete and duplicate surveys were removed. Surveys were then collated into random batches of 50 for data entry. Data from the surveys were then input into a database. Following inputting, randomly selected batches were pulled and reviewed for quality assurance.

Upon completion of data entry and after the open period for the online survey had passed, data from online surveys was downloaded to CC&G. Like the paper surveys, this data was also verified for completeness and duplication. This data was combined with the data from the paper surveys and arrayed in an Excel spreadsheet.

Duplicate Surveys

In total 730 surveys were purged from the final data file. Of these, 724 were online surveys and 6 were paper surveys. To ensure maximum accessibility, the link for the online survey was published on a public facing website at Laguna Honda, this may account for the large number of online duplicates.

Online surveys were judged as duplicates because:

- The elapsed time of the survey (from the first question to the last) was too brief;
 - Nearly all the purged online surveys were completed in less than one minute;
- The operating system and device used to complete the surveys was the same and they came from the same IP address;
 - Nearly all the purged online surveys used an I-phone with the same browser and operating system from the same IP address; and,
- The purged online surveys were completed in succession.

Paper surveys were judged as duplicates because:

- The handwriting was the same;
- Ratings on the closed end questions were the same; and
- Comments on open ended questions were nearly identical.

Weighting

Once the data was arrayed, the number of completes per department was examined. This was determined by examining answers to Q13 on the survey (“Select your department”). Comparing this data with the number of surveys distributed to each department revealed departments where the number of completes received (as Q13 was filled in by the respondent) was greater than the number of surveys distributed and larger departments where the number of completes was fewer than smaller departments. To ensure proportional representation of each department in the hospital (to prevent a large response from one single department unbalancing the hospital-wide results), it was decided to weight the data.

The initial step in weighting the data was to note what percentage each department had of the total distributed. For example, 1,655 surveys were distributed. Of these, 39 (or 2.3% of the total distributed) were assigned to the Physicians/Providers. CC&G received 1,078 completed surveys, which includes 60 surveys where respondents left Q13 blank. Of these 1,078 surveys, 23 (or 2.1% of the total received) were from Physicians/Providers. Conversely, Activity Therapy was distributed 40 surveys (or 2% of the total distributed). CC&G received 42 surveys with Activity Therapy marked in Q13 (or 4% of the total received).

The next step of weighting is to add a factor (based on the answer to Q13) to each entry to enable the data to be proportional at the hospital level. To use the previous example, results from Physicians/Providers Department would need to be 2.3% of the completed data and Activity Therapy would need to be 2% of the completed data. Entries from the Physicians/Providers Department were assigned a weighting factor of 1.064, and entries from Activity Therapy were assigned a weighting factor of 0.598.

The final step is completed by the tabulation program. When computing the results from the data, the program “multiplies” individual surveys by the weighting factor. In this example, answers from surveys from Physicians/Providers Department are counted 1.064 times and results from Activity Therapy Department are counted 0.598 times. In this way, when overall results are arranged by department, results from Physicians/Providers Department are 2.3% of the total and results from Activity Therapy are 2% of the total.

2017 vs. 2016 Unweighted Data Comparison

The following table compares the data from 2017 and 2016 without the benefit of data weighting to ensure statistical confidence.

2017 vs. 2016 Unweighted Data Comparison
