

## OB-GYN Standardized Procedure Summary of Changes

1. In many of the protocols under section “Plan...patient conditions requiring consultation” (ie Protocol #1 HCM, page 7-8, 2f), it states “Initiation or change of medication other than those in the formularies”. CIDP pharmacy representative has suggested deleting this criterion as restrictions are imposed independently by pharmacy and may not differ by provider type.
2. Page 13 (HCM-prenatal care), “F” re care of HIV-infected women. Disease specific criteria deleted as this degree of specificity is inconsistent with the rest of the protocol.
3. Protocol #11 (Contraceptive Implant Insertion) page 31 we have removed time frame since length of time device is effective changes based upon the device and literature. We also agreed that we would not list off label uses under indications. Finally, under Precautions we think it is enough to state ‘refer to prescribing info’ as it states in IUD Protocol.
4. Protocol #13 IUD, page 41 under Prerequisite, we will add a line to cover those clinicians who come with experience.
5. Protocol #14 ADDED “IUD removal when no strings are visualized”. This was authored by Dr. Rebecca Jackson and APP Cata Leyva.
6. Protocol #15 Pre-op Eval of 2<sup>nd</sup> tri abortion, page 42, under A Definition, #3 was added: Mechanical dilation. There were also minor grammatical changes.
7. Protocol #17-19 (all related to Ultrasounds) there were 2 changes. Under Prerequisties, Dr. Perron-Burdick feels that 40 ultrasounds are a lot, so she is proposing 30. Also, under Reappointment Competency, we agreed that this seems redundant when in fact every ultrasound done by a clinician needs to be reviewed and signed off by an attending within 24 hrs for billing purposes. We felt we could remove the remove the numbers specification re chart reviews and insert a statement based upon the above.
8. Protocol #22 Sedation, anesthesia was consulted and they had 2 minor changes on page 72: remove dopamine and change ‘should’ to ‘must’.
9. Protocol #23 Vulvar Skin Biopsy, considering excisional biopsies are very rare, under Proctoring we will not specify each type, rather say either type. Also, change minimum number to 3.
